

Aliro Access Control Market Package 1.15

New features and functions

Aliro's cutting-edge IP access control system has just got smarter. We're pleased to announce updated and superior capabilities, designed to help users and installers.

We've built in refinements to meet and exceed the latest needs of Aliro customers. There's more flexibility and customisation than ever, with the same easy management and control.

- ▼ Customisable light frame colour and sequence for different events
- ▼ Visitor access keypad codes valid for a fixed period of time
- ▼ Four new languages – Russian, Czech, Greek and Polish
- ▼ Registrations and roll call reporting to support emergency evacuation procedures
- ▼ Special pin code requirement for cardholders
- ▼ New user and card registration by USB reader in the location
- ▼ Updated event text filters for clearer user and administrator information

Customisable light frame colour and sequence for different events.

New functions: in detail

Discover how the update enhances Aliro's superior performance, simple installation, cost effectiveness, ease of management and flexibility for organisations and buildings of all sizes.

There's never been a better time to recommend and install Aliro.

▼ Customisable light frame colour and sequence for events

Make it easy for users and administrators to visually identify different types of events including access granted or denied.

▼ Group access codes

Issue a temporary keypad code to building visitors. Administrators can set this to expire after a fixed period, depending on the length of visit.

▼ Four new languages

Aliro now supports Russian, Polish, Greek and Czech, along with the original 11 European languages.

▼ Registrations and roll call reporting to support emergency evacuation procedures

In the event of an emergency evacuation, system administrators can instantly produce a system report, showing the people who were logged entering the building and where they are located. Fire wardens can quickly identify and seek anyone shown that has not registered at a muster point using the Aliro mobile app notifications.

▼ Card or pin code access

Today's companies require system flexibility. Aliro can cater for this with enhanced user interaction with the introduction of personal codes that allow card holders to access areas secured with keypads without the need for a card.

▼ New user and card registration by USB reader locally

Adding new employees and registering new cards is quick and easy with the new USB reader. Reception or security staff can create and issue them securely on-site and gain authorisation online.

▼ Updated Event Text Filters for clearer information

Five separate filters – AP, User, Door, Area, General – allow immediate and precise identification of what is taking place at any access point in the system.

*Refined to meet and exceed requirements,
Aliro just got easier and smarter.*
